● PROFILE SUMMARY

Motivated and detail-oriented software developer with a strong foundation in web development and problem-solving. Passionate about building user-friendly applications and eager to contribute technical skills while continuously learning and growing in a collaborative environment.

● EXPERIENCE

● ABC Technologies

June 2024 - August 2024

Software Developer Intern

Delhi

Developed responsive web interfaces using React and Tailwind CSS. Integrated REST APIs and optimized application performance. Collaborated with cross-functional teams to implement new features. Participated in code reviews and debugging sessions. Developed responsive web interfaces using React and Tailwind CSS. Integrated REST APIs and optimized application performance. Collaborated with cross-functional teams to implement new features. Participated in code reviews and debugging sessions. Contributed to the development of responsive web interfaces using React and Tailwind CSS, ensuring seamless user experiences across devices. Integrated REST APIs to enable dynamic data flow and optimized application performance for efficiency. Collaborated closely with cross functional teams to design and implement new features, participated actively in code reviews, and engaged in debugging sessions to maintain code quality and deliver reliable solutions.

● Frontend Developer Intern

January 2024 - June 2024

TechNova Solutions — Remote

Pune

Built responsive user interfaces using React and Tailwind CSS. Integrated REST APIs with frontend applications. Improved website performance and fixed UI bugs. Worked closely with designers and backend developers to deliver new features. Built responsive user interfaces using React and Tailwind CSS. Integrated REST APIs with frontend applications. Improved website performance and fixed UI bugs. Worked closely with designers and backend developers to deliver new features. Built and optimized responsive user interfaces with React and Tailwind CSS, ensuring seamless performance across devices. Integrated REST APIs to enable dynamic data flow and collaborated closely with designers and backend developers to deliver new features. Improved website performance, resolved UI bugs, and participated in debugging sessions to maintain code quality, enhance usability, and support the delivery of reliable, user friendly applications.

● EDUCATION

Bachelor of Science in Computer Science

MIT World Peace University, Pune
2020 – 2024 • CGPA: 8.7 / 10

Higher Secondary Certificate (HSC)

Delhi Public School
2018 – 2020 • Percentage: 89%

CBSC

Noida Public School
2015 • Percentage: 75%

● SKILLS

Programming Languages

JavaScript TypeScript Python Java

Backend

Node.js Express.js MongoDB MySQL

Frontend

React.js, HTML5 CSS3 Tailwind CSS Bootstrap

Soft Skills

Problem Solving Communication Team Collaboration
Time Management Leadership

● PROJECTS

React Resume Builder

React, Tailwind CSS, React Hook Form, React PDF

Developed a responsive resume builder that allows users to create professional resumes and download them as PDFs. Developed a fully responsive resume builder application that empowers users to input their personal and professional details, customize layouts, and instantly generate polished resumes with the ability to seamlessly download them as PDFs for job applications. Designed and developed a responsive resume builder web application that enables users to easily input personal and professional details, customize layouts, and preview their resumes in real time. The tool leverages modern front end technologies to ensure seamless performance across devices, while offering a one click option to generate and download professional, print ready PDF resumes tailored for job applications.

Maths AI Agent Integrated With RAG Vector Database

LangChain, Ollama LLM, FAISS Vector Store, HuggingFace Embeddings, RecursiveCharacterTextSplitter, RAG-based Information Retrieval

RAG-based Information Retrieval Engineered a Maths AI Agent integrated with a Retrieval Augmented Generation (RAG) vector database to deliver precise, context aware solutions for complex mathematical queries. The system leverages embeddings to store and retrieve relevant problem data, enabling the agent to combine reasoning with contextual knowledge.

This integration enhances accuracy, scalability, and responsiveness, allowing users to interact with an intelligent assistant capable of solving advanced math problems efficiently. Developed a Maths AI Agent seamlessly integrated with a RAG vector database to provide intelligent, context driven mathematical assistance. By embedding formulas, problem statements, and solutions into vector space, the agent retrieves the most relevant knowledge and combines it with generative reasoning to deliver accurate, step by step answers. This architecture improves efficiency, scalability, and adaptability, enabling advanced problem solving for students, researchers, and professionals.

Multifunctional Fine Tuned Retrieval-Based Chatbot Leveraging RoBERTa , BART Transformers

transformers, cosine_similarity, sentence-transformers, textblob, torch, scipy, flask, sqlalchemy, stsb-roberta-base

The "Multifunctional Fine Tuned Retrieval-Based Chatbot" is an advanced AI-driven system designed to provide accurate, context-aware responses to user queries and can be utilized for customer support. The chatbot is also able to conduct Sentiment Analysis such as if the given query is positive , negative and neutral. This chatbot leverages state-of-the-art language models, specifically RoBERTa and BART Transformers, to enhance its natural language processing capabilities.

The model is trained upon different domains like healthcare , finance and normal conversations, It have learned the questions and answers patterns and could be used for customer support,etc. Built a multifunctional retrieval based chatbot fine tuned with RoBERTa and BART transformer models to deliver highly contextual, accurate, and conversational responses across diverse domains. The system leverages advanced embeddings and retrieval mechanisms to fetch relevant knowledge, while transformer based fine tuning ensures natural language fluency and adaptability. This architecture enables scalable, intelligent interactions that combine precision, versatility, and user centric design.

LLM Healthcare-Assistant-RAG-Integrated-AI-Agent

LangChain, Ollama LLM, FAISS Vector Store, HuggingFace Embeddings, RecursiveCharacterTextSplitter, Selenium WebDriver

LLM Healthcare-Assistant-RAG-Integrated-AI-Agent is an AI-powered system designed to provide reliable healthcare-related responses using Memory Based Retrieval-Augmented Generation (RAG) and AI Agent. Primary Approach: Searches FAISS vector database for answers. Memory: Saves conversations between user and AI.

Fallback Mechanism: If no relevant results are found, an AI agent dynamically generates a response using Selenium-driven web automation, web scraping, and crawling techniques. Search Optimization: Utilizes DuckDuckGo, structured querying, and real-time data extraction for precise answers. Developed an LLM Healthcare Assistant AI Agent integrated with Retrieval Augmented Generation (RAG) using a FAISS vector database to deliver reliable healthcare responses.

The system stores user AI conversations for contextual memory and employs a fallback mechanism where, if no relevant results are found, the agent dynamically generates answers via Selenium driven web automation, scraping, and crawling. Search optimization leverages DuckDuckGo, structured queries, and real time data extraction for precise, trustworthy outputs.
